

Kaspersky® Small Office Security

Always-on security for always-on businesses.

For small business owners who have to deal with everything themselves, including IT, it can be challenging to focus on what matters. Kaspersky Small Office Security has been specifically designed for small businesses who want to focus on growing their revenues while having peace of mind about their IT security with protection that's affordable and reliable. Kaspersky Small Office Security delivers all the capabilities you need to protect your business effortlessly while freeing you up to focus on it.

Kaspersky Small Office Security combines the simplicity of home PC protection with special capabilities to keep your business safe while employees are doing their jobs.

- **'Set and forget' security** for 5-25 employees
- **Protect your office** on Windows and Mac PCs and laptops
- **Protect Windows file servers** to secure the files you value most
- **Secure Android devices** to let employees work from their personal smartphones and tablets
- **Rely on advanced ransomware protection and rollback** just in case someone makes a mistake
- **Pay bills and taxes safely online** with Safe Money
- **Secure and store your high-value files** with File Encryption and Backup
- **Make sure the apps you use are safe** with built-in vulnerability scanning and timely updates

Small business security? No worries.

Kaspersky Small Office Security is designed specifically to fit a smaller office environment. A security solution that doesn't demand your attention, letting you focus on your business priorities. It protects your employees without distracting them with messages or notifications, so they can work uninterrupted.

No need to buy anything but the license

Protection works efficiently and effortlessly with your business's existing hardware, equipment, and devices. It's an extremely cost-effective solution that boosts productivity while adding crucial security to small business systems without busting the budget.

Data protection across all devices and occasions

Work with your files on any device – PCs, Mac computers, Windows file servers and Android mobile devices. They will all be protected against known, unknown and advanced threats.

Protection against ransomware for neglectful employees

Even if an employee has followed a malicious link and ransomware tries to encrypt work files, a backup copy of the unencrypted file is automatically created for you to restore.

Safely store and transfer valuable files

Data encryption converts data stored on PCs and file servers into an unreadable form that thwarts attempts by cybercriminals to access confidential information. Unauthorized access is prevented by storing the converted data in special protected vaults.

And there's more:

- Local and online data backups of important files in case of emergency
- File shredding to permanently erase data
- Discovery and removal of unused data

Avoid the traps of online fraud and scams

Protect your business's money, credit card numbers and banking information. Whenever the business accesses online banking or payment services – via PC or Mac – Kaspersky's unique Safe Money adds an extra layer of security, making it easy to establish if a website is safe (when the browser is launched with Safe Money, a green frame indicates that the site is safe).

Work safely on mobile devices

Kaspersky Lab's mobile security and management technologies mean you're protected when you're on the move – even when employees use their own mobile devices for work. Protect Android smartphones and tablets and even locate, lock or wipe missing devices if necessary.

Security you can trust – and we can prove it

No other vendor can match Kaspersky Lab's record of success in independent tests. In 2018 Kaspersky Lab products participated in 88 independent tests and reviews. Our products were awarded 73 firsts and achieved 77 top three finishes.

Feature-rich security, no fuss

Security that works right out-of-the-box

- Install – and forget about any security issues
- No management or configuration required
- To protect any device, just send one e-mail to the person you want to protect

Safe Internet, email and privacy

Automatically protect your business from malicious attempts to hijack your data or network.

- Searches for and removes unwanted/unsafe browser extensions
- Blocks malicious web sites and suspicious downloads
- Filters out spam, phishing mails and suspicious attachments
- A special "do not track" feature monitors and blocks websites from tracking and spying on your online activities

Secure Windows File Server

- Protect Windows file servers from ransomware and cryptolockers: System Watcher detects and blocks malicious activity, and allows rollback of malicious actions
- Software updater provides a list of new updates available for installed applications making it easy to delete unused or outdated system data

Account takeover prevention

- Get notified if your file server has a weak password like "12345" or your password hasn't been changed for a long time
- Password Manager stores and secures all your passwords – you only have to remember one

Protection for mobile devices

- Protect Android-based smartphones and tablets from malware
- Remotely locate, lock and wipe stolen or lost devices

Convenient web portal

- Check your license status and expiration date
- Protect new devices just by emailing a link
- Remotely lock stolen or missing mobile devices
- Send a support request if you need any help

Do it all from ksos.kaspersky.com – no experience or special skills necessary.
